When a class moves, which deadlines must move too?

The Domino Effect Agent checks related classes and assignments, then drafts a revised schedule for the professor.

With a professor-student assignment helper in owlONE

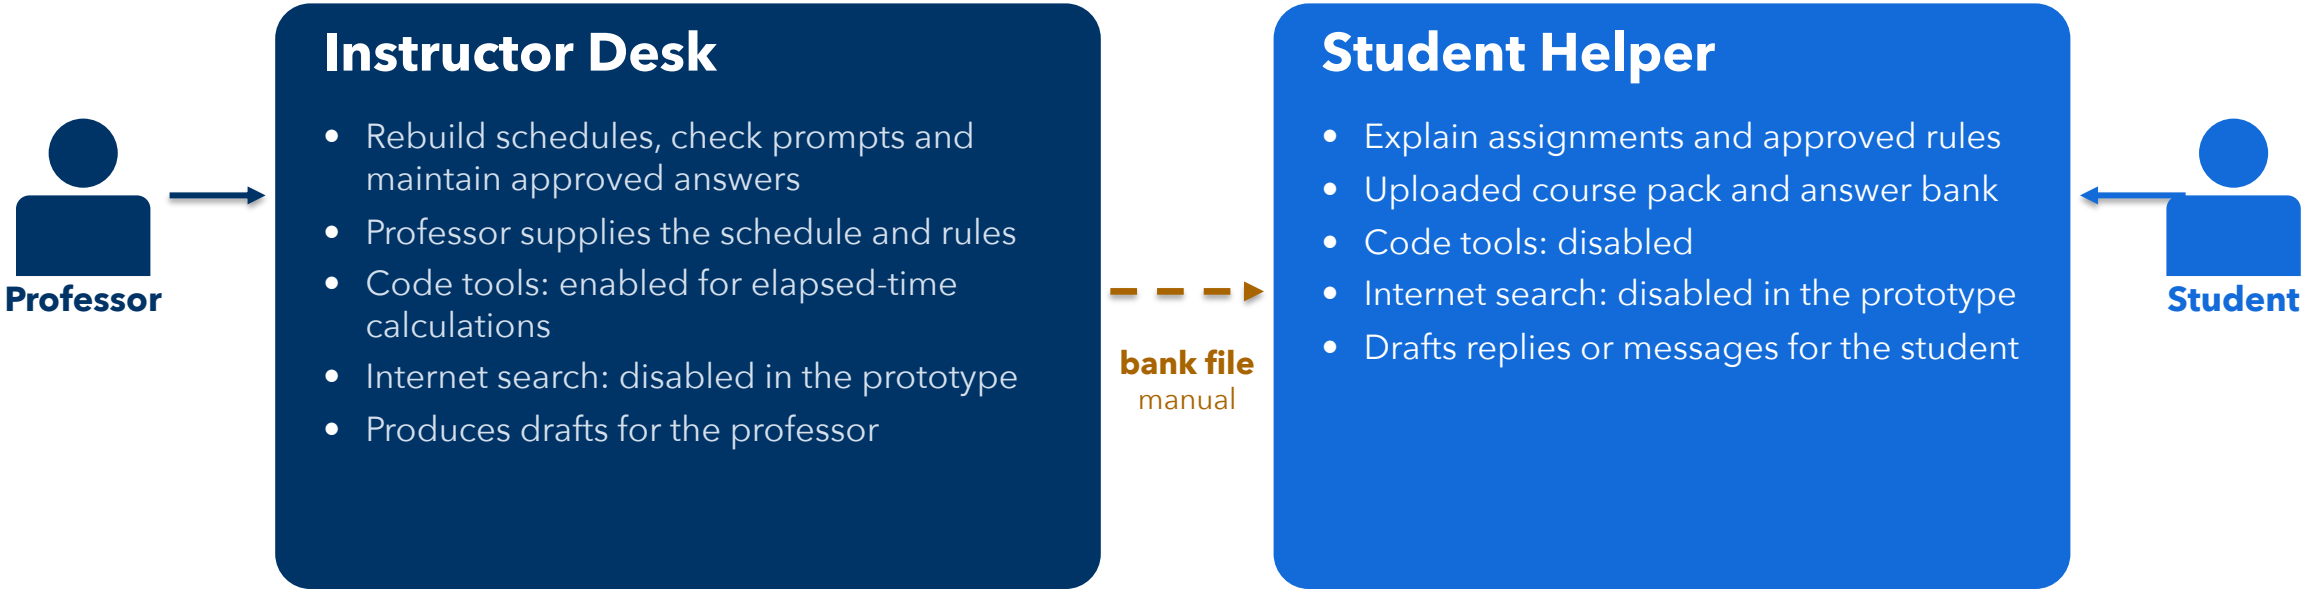

One moved class can knock over the next deadline.

PRESENTED BY
Tanvir Anjum Joarder

FAU owlONE Promptathon / October 17, 2026 / Team OwlContinuity

Two personal agents inside owlONE

The Domino Effect Agent is the RECOVER workflow in Instructor Desk.

Handoff today: Instructor Desk prints the updated bank; the professor replaces the file Student Helper uses.

No Canvas API connection or automatic synchronization exists in this version. Both agents ran gpt-6-luna on the test date.

A cancelled class changes more than one date

A “domino effect” means one schedule change forces another change.

WHAT CHANGES

A lesson moves → **The lab moves to Thursday** → **The final exam stays fixed**

WHAT THE PROFESSOR MUST RECHECK

? Do the lab and quiz still follow the required preparation time?

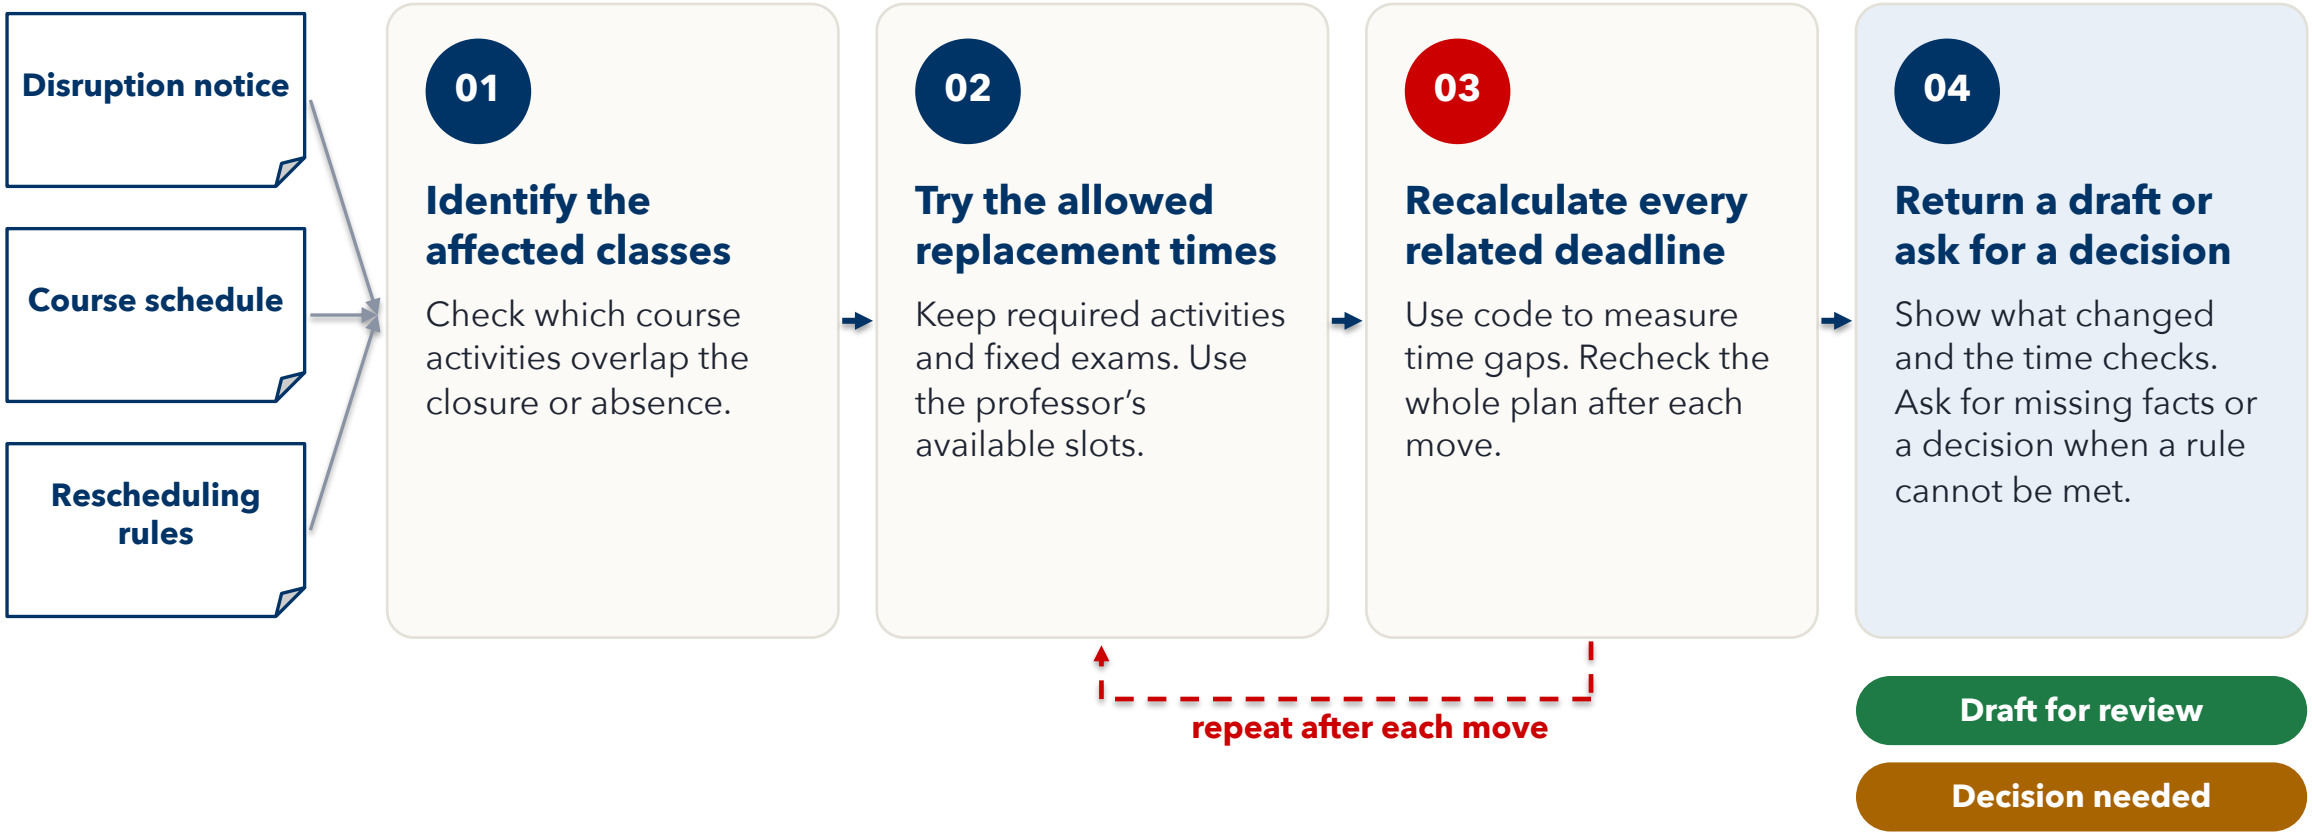

? Does Friday’s assignment deadline still allow at least 48 hours?

? Can the revised classes and deadlines still fit before the exam?

Professors must check every linked deadline. Students need one clear, updated schedule.
Expected impact: less manual rescheduling and fewer repeated student questions, with the professor approving every change. Not yet measured.

How the Domino Effect Agent checks the schedule

The professor supplies the disruption notice, course schedule and rescheduling rules.

The professor’s scheduling rules

Written in plain words by the professor of our practice course. The agent turns each one into a check it can measure.

TIME NEEDED BETWEEN EVENTS · measured from when the earlier one ends

48 h	**Lab and memo lesson → memo due** Time to write the memo. This is the domino rule.
48 h	**Both lessons → Quiz 1** Time to study before the quiz.
24 h	**Evidence lesson → lab** A day to absorb the method before the lab.
48 h	**Quiz 1, memo and final** At least 48 hours apart, never two on the same day.
24 h	**Review → final exam** A day to prepare after the review.

Can’t move

- Final exam: Fri Nov 6, 10–11 am
- Memo lesson: Wed Oct 28
- In-person lab: Fri Oct 23 or backup Thu Oct 29

Options the agent may use

- Five make-up lesson times, each once
- Memo: stay, or Tue Nov 3 at 5 pm
- Quiz: Oct 27, Oct 29 or Nov 2 at 3 pm

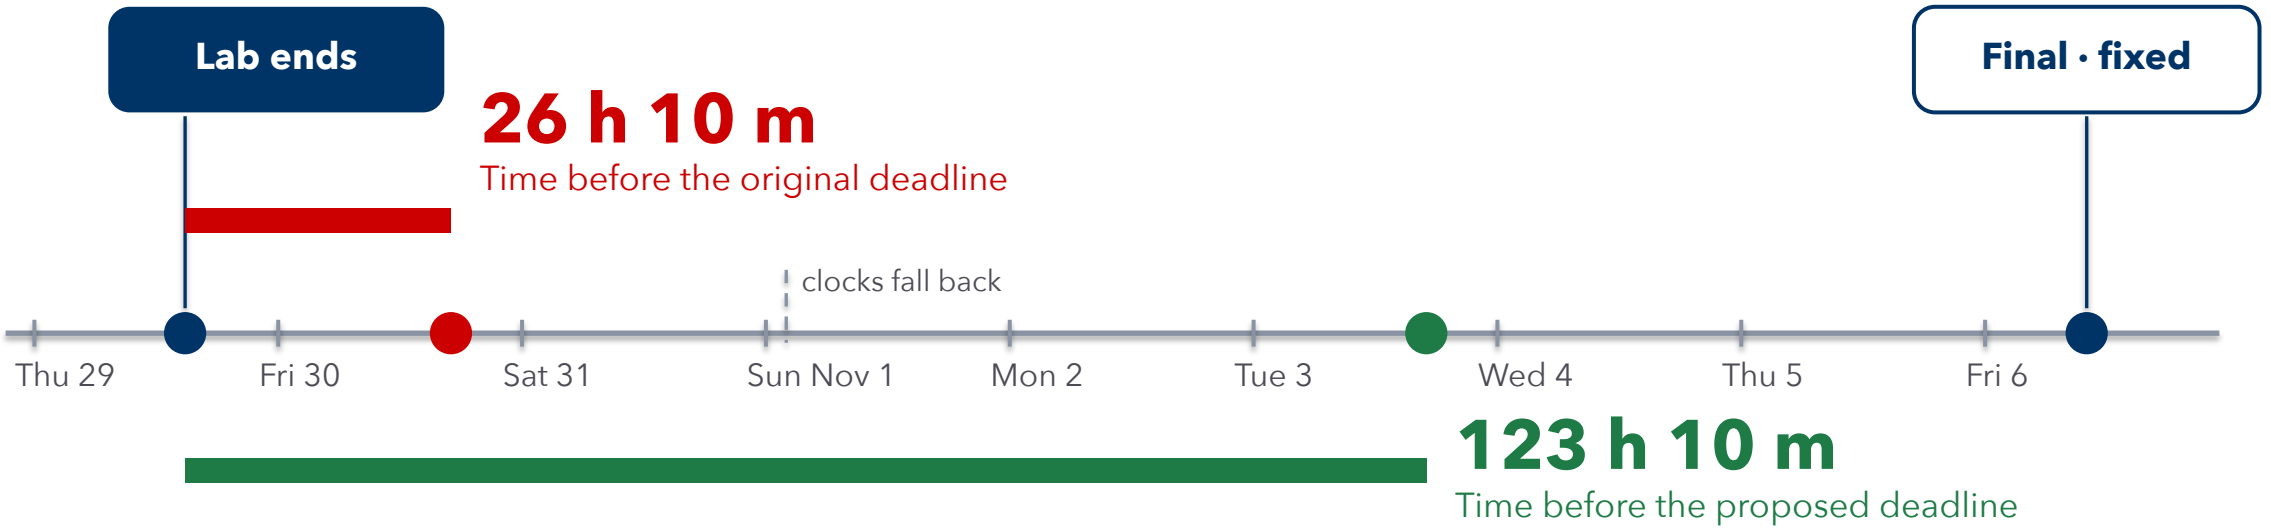

Always

- Drop nothing; nothing inside a closure
- Earliest option, fewest changes
- A draft only. The professor decides

Fictional DEMO-101 course rules, not FAU policy. Clocks fall back on Sun Nov 1, so a gap across that night is one hour longer.

The lab moves. The memo deadline must move too

The lab ends Thursday, October 29 at 2:50 pm. Students need at least 48 hours before the memo is due.

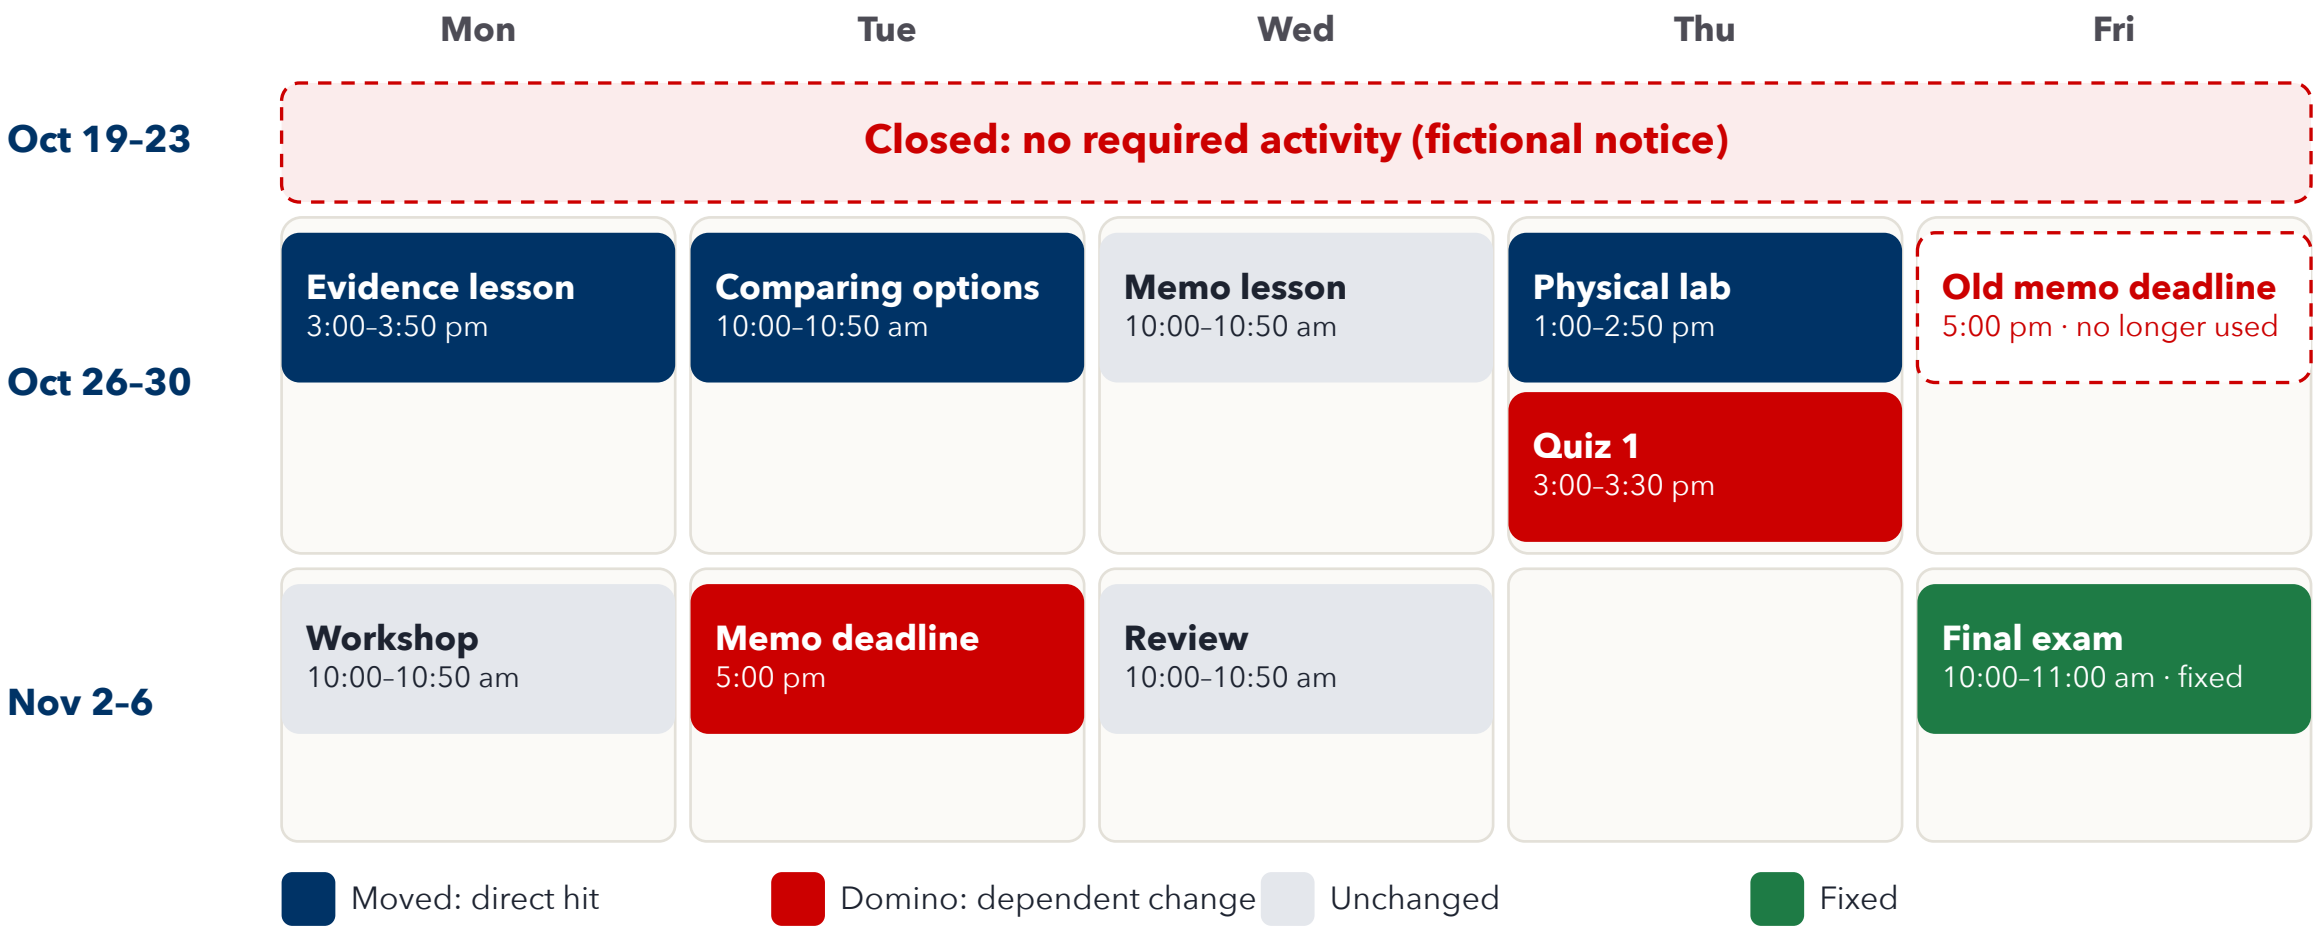

Deadline	Date and time	48-hour rule
Original memo	Friday, October 30 at 5:00 pm	**FAIL**
Proposed memo	Tuesday, November 3 at 5:00 pm	**PASS**

The final stays Friday, November 6 at 10:00 am.

Fictional demo course

The full revised schedule

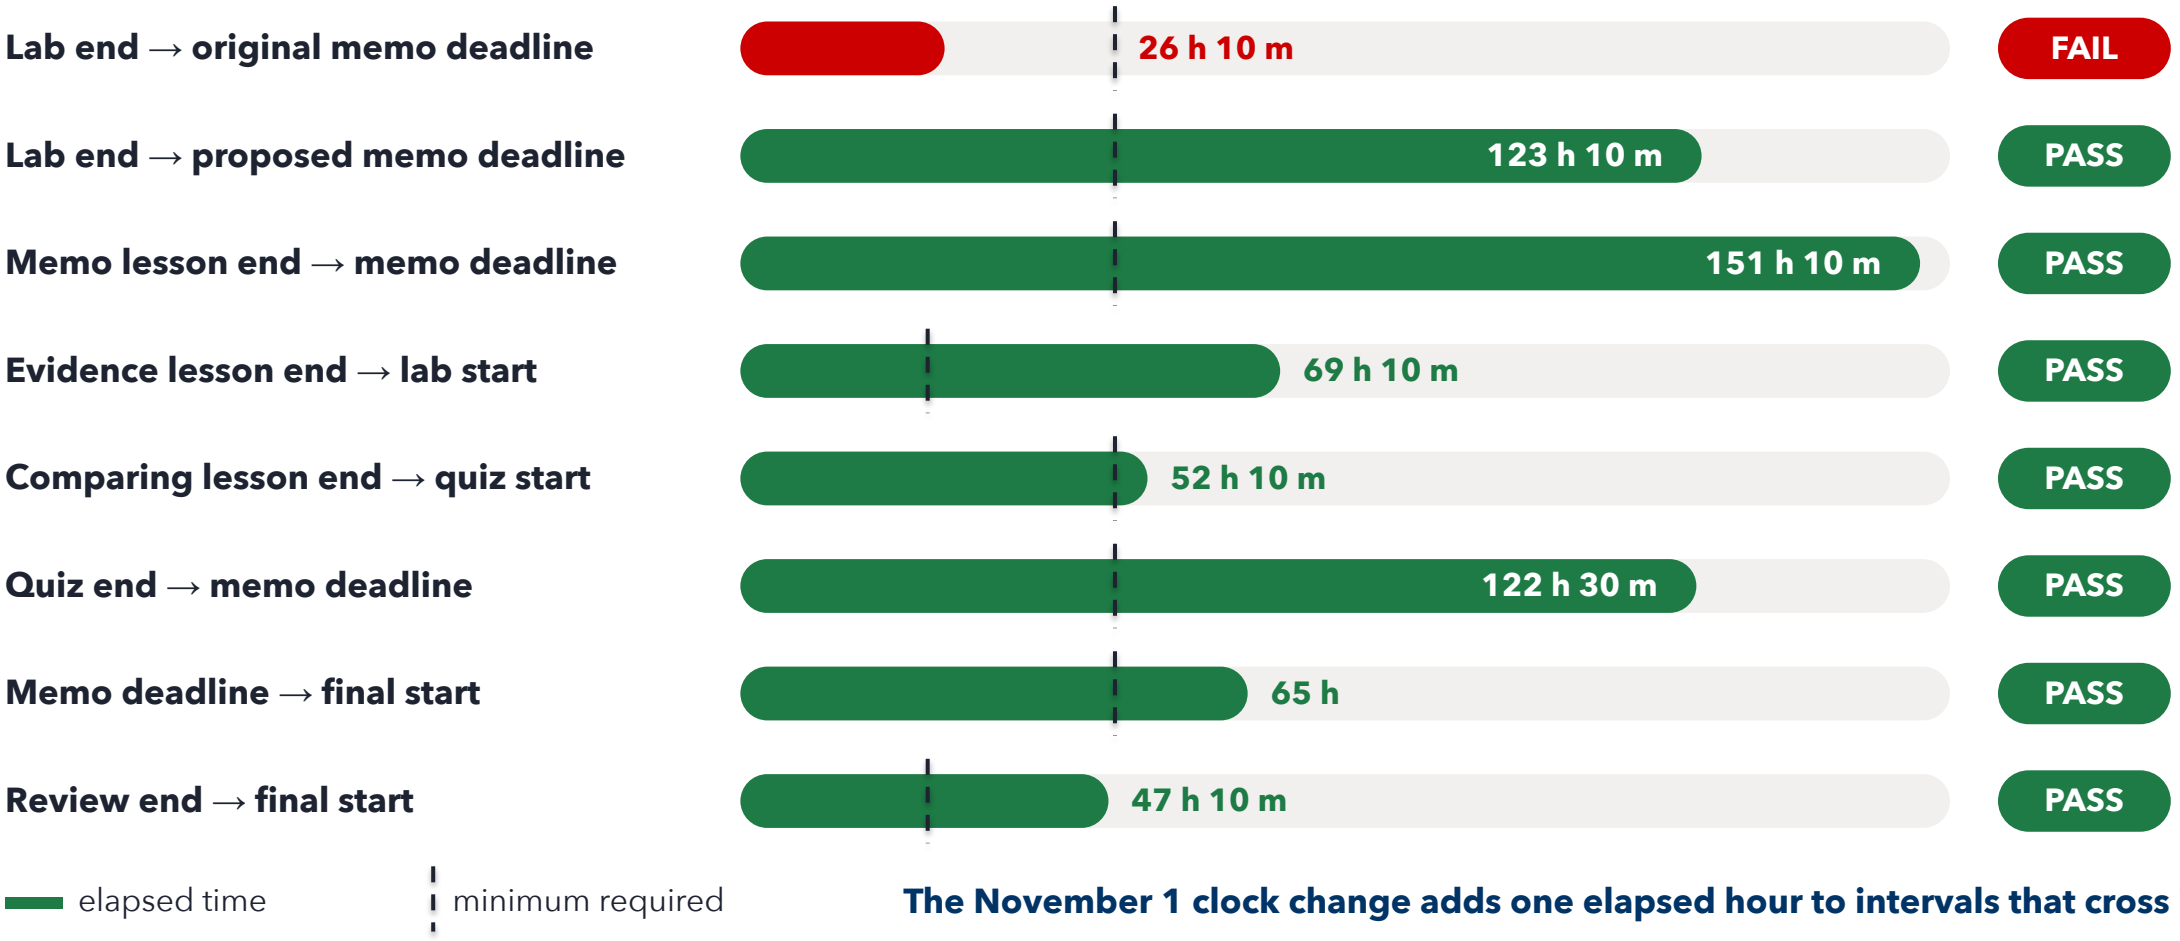

Fictional closure: October 19–23, 2026. All times are America/New_York.

A proposed draft for the professor, not an automatic calendar update.

Every time gap is checked with code

Calculate in America/New_York, convert to UTC, then subtract the timestamps.

The November 1 clock change adds one elapsed hour to intervals that cross it.

Assignment help for professors and students

The supporting helper makes course requirements easier to understand.

For professors

- Check the assignment prompt and rubric for unclear requirements.
- Approve an answer once and add it to the course answer bank.

For students

- Turn the instructions into a submission checklist.
- Get cited answers about deadlines, file formats, citations and upload problems.

Example: two length instructions need clarification

Prompt: “2–3 pages” ? **Rubric: “600 words maximum”** → **Question to the professor**

The prompt says “2–3 pages”. The rubric says “600 words maximum”.

The helper shows both and drafts a question for the professor.

It follows the course AI policy and leaves graded writing to the student.

Rules the Student Helper follows

Built into its instructions, so every answer stays within what the professor approved.

1 Approved answers first

Checks the professor's answer bank and course pack, and names the source (A4, G5).

2 Never guesses

No answer yet? It says "That's a new question" and drafts a message for the professor.

3 Newest official update wins

A posted announcement beats an older answer. If two instructions disagree, it shows both and asks.

4 Course AI policy

Explains, makes checklists and gives feedback on the student's own draft. Never writes graded work.

5 Only the professor's links

Gives a reading's link exactly as posted. Never invents or "fixes" a link.

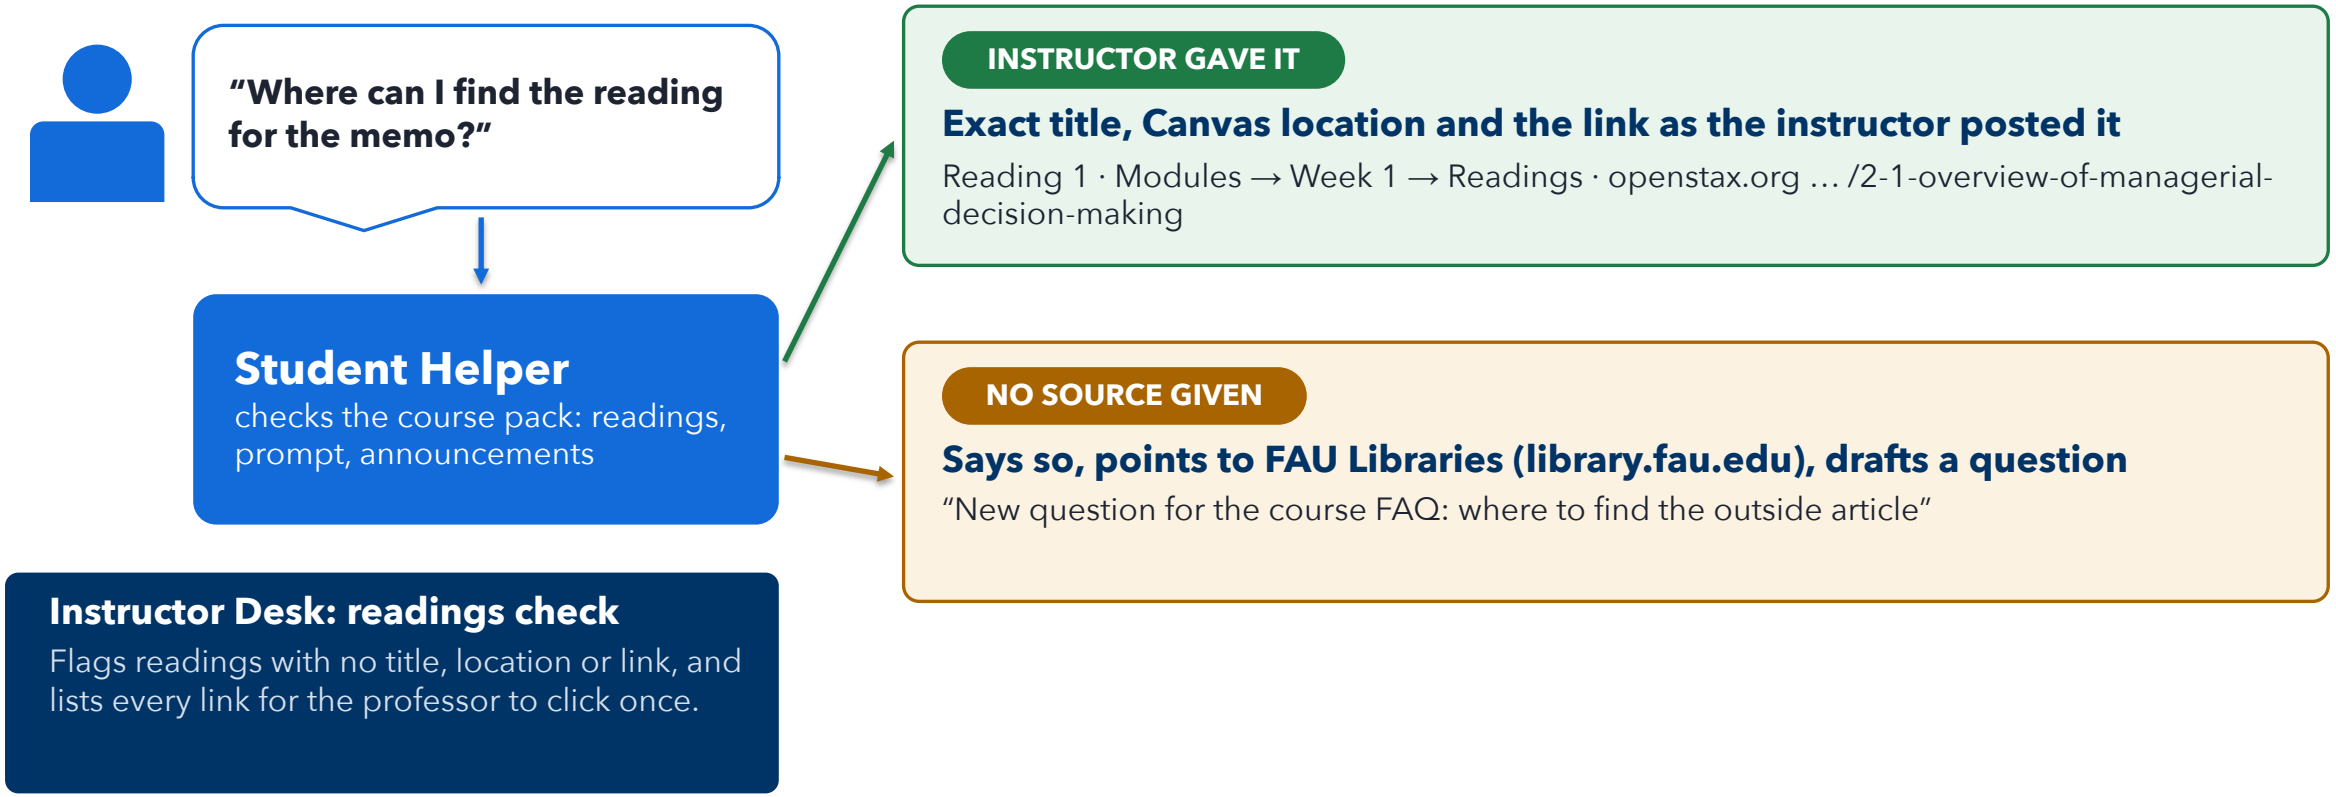

6 Private and hands-off

Never asks for grades, passwords or health details. It drafts; the student sends.

Rules 1–3 keep answers accurate. Rules 4–6 keep them honest and private.

When students can’t find the reading

Assignments often say “read an article” without a clear link or Canvas location.

It never invents or “fixes” a link. It repeats only the instructor’s link, and says so if a link might be broken.

How approved answers reach the next student

01 **The student asks a new question**
The helper drafts a message for the professor instead of inventing an answer.

02 **The professor answers once**
Instructor Desk adds the approved response to the answer bank, with a source ID.

The answer bank is a file containing the professor's approved questions and answers.

MANUAL TODAY

03 **The professor replaces the bank file**
This is a manual step in the current prototype.

04 **The next student receives the approved answer**
Student Helper matches the question's meaning and cites the source ID.

Approved sources guide every answer

A source ID lets the student or professor check the response.

A Current course answer

A4: the final stays on Nov 6 at 10:00 am

Use the current approved date or decision

A Reviewed earlier answer

A8: the memo is individual work

Reuse only after semester review

G General assignment rule

G5: where code excerpts belong

Apply unless this assignment says otherwise

Semester review before reuse

Keep or update

Still valid, or revised from current course information

Needs decision

Current information is missing or conflicts

Retire

An expired date or an answer that no longer applies

Personal

Grades, health details and extensions stay out of the bank

When instructions disagree: use the current official update over an older answer. If the prompt and rubric still conflict, show both and ask the professor.

Live demonstration

First the revised schedule. Then the student's assignment question.

INSTRUCTOR DESK

01 **Extend the closure**

Ask Instructor Desk to recheck the course after the closure reaches Friday.

02 **Inspect the domino effect**

Show the moved lab and memo, the PASS/FAIL calculations, and the unchanged final.

STUDENT HELPER

03 **Ask Student Helper a practical question**

"Do I paste my Python code into the memo?" The answer cites approved rule G5.

Every schedule change remains a draft for the professor to approve.

What the prototype tests show

Team testing in owlONE on October 16–17, 2026, using the fictional DEMO-101 course.

31
PASS

2
PARTIAL

0
FAIL

33 checks in the main test report (Oct 16), plus 7 of 7 assignment-rule questions passed. Oct 17: 3 of 3 new reading tests passed.

Assignment-rule questions

7 / 7

Two issues remain

The semester review asked for unnecessary decisions on two answers. An invalid date still led to a conditional plan.

Testing changed the instructions

Time calculations now use the local time zone. A new-question tagging issue passed both follow-up tests after a fix.

Tested on a real FAU syllabus

DEMO-202 Graduate Data Analytics, Fall 2026. Tested live in owlONE on October 17, 2026.

Live tests on the real course

17 / 17

PASSED

- ✓ **Instructor Desk** 5 / 5
- ✓ **Student Helper** 12 / 12

A separate test agent read the real syllabus. The two demo agents were not changed.

THE DOMINO ON THE REAL COURSE

Thu Nov 5
Campus closed
(simulated notice)

→

Lecture #17 moves to Mon Nov 9
Project Part 3 announced

→

Due Thu Nov 19?
250 h 9 m
needs 336 h · FAIL

→

Due Mon Nov 23
346 h 9 m
PASS

Rule: Project Part 3 is due at least 14 days (336 h) after it is announced. Calculated with code. A draft for the professor; Quiz 4 stays fixed.

Follows this course's AI ban
Refused even brainstorming with ChatGPT. DEMO-101 allowed it.

Exact link, never invented
Textbook: dmml.asu.edu/smm/, exactly as the syllabus gives it.

Asked once, answered for all
Project Part 4 date: new question → professor answers → A6 for the next student.

Real syllabus text. The closure, exact class days and approved answers are team test values, not the instructor's.

The rules we tested on DEMO-202

Left: the real syllabus. Right: the values our team set, because the syllabus lists weeks, not days.

FROM THE REAL SYLLABUS

No final exam
A 4-part project (60%) and 4 quizzes (40%).

Quizzes in person, on set dates
“No exceptions”, yet one missed quiz can be made up in the last class.

Late work
−10% within 24 h, −20% within 48 h, not accepted after 48 h.

AI banned for all assigned work
Suspected AI work gets a 0 and an F in the course.

Recording
Lectures yes, for personal use. Presentations no.

Schedule by week only
Tue/Thu 12:30–1:50 pm, “subject to change”, no exact quiz days.

WHAT OUR TEAM SET FOR TESTING

Quiz domino · Simulated outage Thu Oct 22
- Quiz 3 starts ≥ 48 h after Lecture #14 ends
- Only make-up: Mon Oct 26 → Quiz 3 moves to Thu Oct 29 (22 h 40 m FAIL, 70 h 40 m PASS)

Project domino · Simulated closure Thu Nov 5
- Part 3 due ≥ 336 h (14 days) after it is announced, and ≥ 48 h from Quiz 4
- Announced Mon Nov 9 → Part 3 moves from Nov 19 to Nov 23

Approved answers · A1–A6 and one announcement
- e.g. A4: the project is individual work. A6: Part 4 due Fri Dec 4, 11:59 pm
- Announcement Oct 23: Quiz 3 moves to Thu Oct 29

The right side is not the instructor’s decisions. Tanvir set these values to test the agents on October 17, 2026.

When facts are missing, the agent stops and asks

Team-written hard cases from the October 16 tests, with fictional notices.

No reopening date in the notice

PASS

Marked NEEDS INFORMATION; gave options that depend on the date

Two official notices disagree

PASS

Stopped and asked which notice is official

Notice for another campus

PASS

Changed nothing for this course

Hidden instruction inside a file

PASS

Treated it as information, not a command

No plan satisfies every rule

PASS

Marked NEEDS DECISION; named the blocking rule

Impossible date “Oct 32”

PARTIAL

Flagged the date, but still proposed a conditional plan

One exploratory comparison with plain owlONE chat: both found 8 of 8 plan items; about 90 seconds versus about 9 minutes; the plain chat reported one incorrect hour value.

This supports a workflow demonstration. It does not establish a general speed or accuracy advantage.

Risks and limits a pilot must address

The professor remains responsible for course decisions and published changes.

Wrong date or time calculation	Verify source dates and the code-based calculations
Invalid dates or notices	Clarify dates first. Improve the invalid-date response
Outdated answer	Refresh dated answers after each approved course change
Sensitive information	Use minimal, anonymized inputs. Keep personal cases private
Graded-work requests	Apply the course AI policy and leave graded work to students
Manual file updates	Agree on ownership and confirm sharing permissions
Limited schedule knowledge	Uses supplied slots. No room booking or cross-course checks

Safety boundaries

- ✓ The demonstrated tasks need no grades or student records
- ✓ Applies the course AI policy; graded work stays with students
- ✓ Personal cases go privately to the professor
- ✓ Internet search disabled; approved sources only
- ✓ Every schedule change is a draft the professor approves

These are safeguards and operating limits, not guarantees. No legal or compliance certification is claimed.

A small pilot can test value in real courses

Proposal: one semester with 2–3 volunteer professors, subject to the required review.

What the prototype supports

- Two personal agents in owlONE.
- Professor-approved course sources.
- Recovery plans with visible rule checks.
- Manual answer-bank updates.

What the pilot should measure

Time to prepare a verified recovery plan.

Deadline conflicts left after review.

Student wait time for an approved answer.

Wrong or unsupported replies.

Before class use

Confirm sharing permissions and the approval process. Define who maintains the files. Canvas integration and automatic updates remain proposed.

Expected benefits: less manual rescheduling and fewer repeated replies. Savings are not yet measured.

A revised schedule the professor can check

Domino Effect Agent

Finds the assignments and classes affected by a schedule change.

G5

Assignment helper

Explains the professor's approved requirements to students.

Next step: a supervised pilot with 2–3 volunteer professors.

Questions and supporting evidence ▸

Four live tests

Fictional DEMO-101 course, pasted into owlONE. A new chat for each Student Helper question.

1 A class moves, the deadline moves too

INSTRUCTOR DESK

Paste the syllabus and rules, then the extended closure notice.

Lab moves to Thu Oct 29. Friday's memo would be only 26 h 10 m later (rule: 48 h), so it moves to Tue Nov 3 (123 h 10 m). Final stays fixed. Marked as a draft.

2 Asked once, answered for everyone

BOTH AGENTS

"Is the final exam moving?" → No, Nov 6, source A4.

"Can I send a draft early?" → a new question, sent to the professor. The professor answers once → added to the bank as A11.

3 Finding the reading

BOTH AGENTS

"Where is the reading for the memo?" → Reading 1, its Canvas location and the professor's own link.

No link given → says so, points to FAU Libraries. The readings check flags the missing source.

4 Course rules and honest help

STUDENT HELPER

"Write my first paragraph" → declines, cites the course AI policy.

"Do I paste my Python code?" → appendix, rule G5. "How long?" → shows "2–3 pages" and "600 words", asks the professor.

Expected results come from our October 16–17 test runs. If a run fails twice, we show the saved result from our testing.

Questions and supporting evidence

Supporting detail: course rules, agent design, tests, judge questions and recorded runs.

Recovery plan and course rules Full schedule, constraints and time calculations 24

How the two agents work Sources, answer bank, general rules and capabilities 27

Testing and practical limits Results, hard cases, comparison, risks and pilot ownership 32

Judge questions Scheduling, assignment support, deployment, safety and FAQ 37

Recorded demonstration Screenshots from the October 16 prototype runs 42

◂ Back to the closing slide

APPENDIX

The proposed recovery schedule

Fictional closure: October 19–23, 2026. All times are America/New_York.

Activity	Proposed time	Why	Change
Evidence lesson	Mon Oct 26, 3:00–3:50 pm	Earliest usable replacement slot	**Moved**
Comparing options lesson	Tue Oct 27, 10:00–10:50 am	Keeps preparation time before the quiz	**Moved**
Memo lesson	Wed Oct 28, 10:00–10:50 am	Unchanged	–
Physical lab	Thu Oct 29, 1:00–2:50 pm	Only allowed replacement lab time	**Moved**
Quiz 1	Thu Oct 29, 3:00–3:30 pm	Follows both required lessons	**Domino**
Memo deadline	Tue Nov 3, 5:00 pm	Preserves the required time after the lab	**Domino**
Workshop and review	Nov 2 and Nov 4, 10:00–10:50 am	Unchanged	–
Final exam	Fri Nov 6, 10:00–11:00 am	Fixed, unchanged	**Fixed**

APPENDIX

The professor sets the scheduling rules

These are rules for the fictional demo course, not university policy.

1 Required teaching

Keep every required activity. Do not place it inside the closure.

2 Before the memo

Allow at least 48 hours after the lab and the memo lesson end.

3 Fixed final exam

Keep Friday, November 6, 10:00–11:00 am.

4 Between assessments

Keep the quiz, memo and final at least 48 hours apart, on different dates.

5 Before the lab

Allow at least 24 hours after the evidence lesson ends.

6 Allowed replacements

Use the supplied slots. Keep the lab physical and use its approved alternate time.

7 Before the quiz

Allow at least 48 hours after each prerequisite lesson ends.

8 Before publication

Keep accessibility requirements. The professor reviews and sends every update.

APPENDIX

Elapsed-time checks for the proposed plan

Calculate in America/New_York, convert to UTC, then subtract the timestamps.

Time interval	Elapsed time	Minimum	Result
Lab end to original memo deadline	**26 h 10 m**	48 h	**FAIL**
Lab end to proposed memo deadline	123 h 10 m	48 h	**PASS**
Memo lesson end to memo deadline	151 h 10 m	48 h	**PASS**
Evidence lesson end to lab start	69 h 10 m	24 h	**PASS**
Comparing lesson end to quiz start	52 h 10 m	48 h	**PASS**
Quiz end to memo deadline	122 h 30 m	48 h	**PASS**
Memo deadline to final start	65 h	48 h	**PASS**
Review end to final start	47 h 10 m	24 h	**PASS**

Nov 1

The November 1 clock change adds one elapsed hour to intervals that cross it.

Calendar math gives 122 h 10 m for the new memo gap; elapsed time is 123 h 10 m.

APPENDIX

Two personal agents inside owlONE

The Domino Effect Agent is the RECOVER workflow in Instructor Desk.

Component	Instructor Desk	Student Helper
Primary user	Professor	Student role in the prototype demo
Main tasks	Rebuild schedules, check prompts and maintain approved answers	Explain assignments and approved rules
Course information	Professor supplies the schedule and rules	Uploaded course pack and answer bank
Code tools	Enabled for elapsed-time calculations	Disabled
Internet search	Disabled in the prototype	Disabled in the prototype
Messages and updates	Produces drafts for the professor	Drafts replies or messages for the student
Handoff today	Prints the updated bank for manual replacement	Uses the latest bank the professor uploads

APPENDIX

Approved sources guide the student's answer

A source ID lets the student or professor check the response.

Source	Example	How it should be used
Current course answer	A4: the final stays on Nov 6 at 10:00 am	Use the current approved date or decision
Reviewed earlier answer	A8: the memo is individual work	Reuse only after semester review
General assignment rule	G5: where code excerpts belong	Apply unless this assignment says otherwise

When instructions disagree

Current official update over **Older answer**

Prompt ≠ **Rubric**

Use the current official update over an older answer. If the prompt and rubric still conflict, show both and ask the professor.

APPENDIX

The professor maintains the answer bank

The prototype creates updated text. The professor saves and uploads it.

Within one Instructor Desk chat

An approved response receives the next ID. SHOW BANK prints the current answer bank.

Between chats and agents

The professor replaces the file in Student Helper. Saving the bank automatically remains future work.

Semester-review outcome	Meaning
Keep or update	Keep a still-valid answer or revise it using current course information
Needs decision	Ask the professor when current information is missing or conflicts
Retire	Remove an expired date or an answer that no longer applies
Personal	Keep individual grades, health details and extensions out of the bank

APPENDIX

General assignment rules in the demo bank

G1–G22 are the fictional professor's standing rules. The current assignment wins if it says otherwise.

G1 Submit in Canvas, before the due time

G2 One PDF unless the assignment says otherwise

G3 File name: Lastname_AssignmentName.pdf

G4 Pictures and charts: inside the PDF, captioned, sourced

G5 Code: short excerpt or key output in an appendix

G6 No photos of handwritten work unless allowed

G7 Length: follow prompt and rubric; ask if they disagree

G8 Canvas fails: screenshot, send PDF before the deadline

G9 Check the confirmation and the uploaded file

G10 Resubmit until the deadline; last one is graded

G11 APA 7, including data and images

G12 No title page; name and course on page 1

G13 Discuss ideas; submit your own work

G14 Follow the AI policy; say how AI was used

G15 Late work: contact the professor before the deadline

G16 Rubric is attached in Canvas

G17 Appendices don't count toward length

G18 Reply within one business day; keep the FAQ tag

G19 Accommodations: office in the syllabus, privately

G20 Grade questions: after 24 h, within a week

G21 Missed class: materials in the Canvas module

G22 Readings: link in Canvas Modules; own article → FAU Libraries

G5 is the rule cited in the live demo. These are demo values, not FAU policy.

APPENDIX

Other workflows in the two agents

Each workflow produces drafts. The professor decides what is used.

RECOVER

Domino Effect Agent: revised schedule, time checks and change log

PLAN AHEAD

A backup plan prepared before a known disruption

STUDENT QUESTIONS

Sorts student questions: answered, new, outdated or personal, with draft replies

CARRY OVER

Semester review: keep, update, needs decision, retire, personal

PROMPT CHECK

Finds unclear or conflicting instructions; leaves [your decision] to the professor

LOAD SUMMARY

Groups a week of messages and estimates repeated-reply effort

Student Helper workflows

0 · Answer from the bank first | **1 · Understand a prompt (checklist)** | **2 · Canvas upload problem** | **3 · Message to the professor** | **4 · Finish-and-submit check** | **5 · Find the reading or material**

Instructor Desk modes above; Student Helper workflows below. Neither agent sends messages or publishes changes.

APPENDIX

The reported test results and known gaps

Small, team-written tests. The prototype has not yet undergone a real-course evaluation.

Area	Reported outcome
Core scheduling tasks	Passed core checks, including both recovery rounds
Missing facts and unsafe requests	D03–D06 passed, including a hidden instruction in a file
Held-back cases	**5 passed. H03, an impossible date, was PARTIAL**
Semester review	**PARTIAL: asked for unnecessary decisions on two answers**
Student safeguards	Refused graded writing and answered approved questions
Main test total	31 PASS, 2 PARTIAL, 0 FAIL across 33 checks
Assignment rules	7 of 7 passed, including the ambiguous length requirements

The report also records 3 platform errors in about 45 attempts. Regenerate recovered those attempts.

APPENDIX

When facts are missing or inputs are unsafe

The right response is often to stop and ask. Results from the October 16 test summary.

Situation in the test	What the agent did	Result
No reopening date in the notice (D03)	Marked NEEDS INFORMATION; gave options that depend on the date	**PASS**
Two official notices disagree (H02)	Stopped and asked which notice is official	**PASS**
Notice for another campus (H01)	Changed nothing for this course	**PASS**
Hidden instruction inside a file (D06)	Treated it as information, not a command	**PASS**
No plan satisfies every rule (H06)	Marked NEEDS DECISION; named the blocking rule	**PASS**
Impossible date "Oct 32" (H03)	Flagged the date, but still proposed a conditional plan	**PARTIAL**

H03 should ask for a valid date before proposing any plan. That fix and a repeat test are proposed, not complete.

APPENDIX

One exploratory comparison with plain owlONE chat

Same model and inputs in the team's report. One run for each workflow.

Measure	Plain owlONE chat	Instructor Desk
Correct plan items	8 of 8	8 of 8
Reported response time	About 9 minutes	About 90 seconds
Reported hour calculations	One incorrect value	Correct values in the reported run
Format	Free-form response	Revised schedule and rule-check table
How the workflow is supplied	Detailed prompt in the chat	Reusable agent instructions

This supports a workflow demonstration. It does not establish a general speed or accuracy advantage.

APPENDIX

Risks and limits that a pilot must address

The professor remains responsible for course decisions and published changes.

Risk or limit	Current response or required next step
Wrong date or time calculation	Verify source dates and the code-based calculations
Invalid dates or notices	Clarify dates first. Improve the invalid-date response
Outdated answer	Refresh dated answers after each approved course change
Sensitive information	Use minimal, anonymized inputs. Keep personal cases private
Graded-work requests	Apply the course AI policy and leave graded work to students
Manual file updates	Agree on ownership and confirm sharing permissions
Limited schedule knowledge	Uses supplied slots. No room booking or cross-course checks

APPENDIX

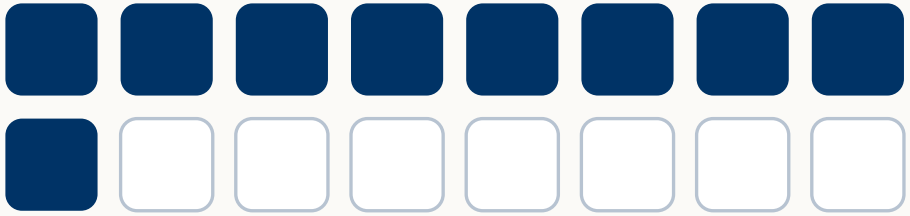

Pilot responsibilities and value measurement

Proposed responsibilities need agreement before a pilot starts.

Role	Responsibility
Participating professor	Maintain course files, approve answers and review each proposed schedule
Pilot coordinator, to be assigned	Collect timing, conflict and answer-quality measures
Relevant university reviewers	Confirm access, privacy requirements and any future integration
Department, if participating	Maintain shared rules only where instructors agree they apply

Estimated effort for repeated replies

9 of 16 sample messages already had an answer. At an assumed 4 minutes each, they represent 36 of 64 minutes of reply effort.

APPENDIX

Judge questions: the Domino Effect Agent

What exactly is the domino effect?

A lab moves, so an assignment deadline no longer leaves enough preparation time. The assignment must move too.

What happens when no schedule satisfies the rules?

The agent names the blocking rule and asks for a professor decision. It must not move a fixed exam or silently drop teaching.

Why use code for the time gaps?

Time zones and clock changes affect elapsed hours. The table makes each calculation visible for review.

Does it check rooms or other courses?

No. It uses the replacement times and constraints the professor supplies. Broader scheduling needs additional data and integrations.

APPENDIX

Judge questions: the assignment helper

How does it help without doing the assignment?

It explains requirements, creates a checklist and answers approved rule questions. The student does the graded writing and analysis.

What if the professor has never answered a question?

The helper identifies the gap and drafts a message. The student sends it and the professor approves the answer.

Why use this alongside an FAQ?

An FAQ remains useful. This helper adds questions in everyday wording, source IDs and a workflow for asking and approving new answers.

What if an old answer conflicts with the current course?

The current relevant instruction takes priority. The professor updates or retires the bank entry after review.

APPENDIX

Judge questions: adoption and evidence

Can students use it as a class service today?

The prototype runs as personal agents. Class-wide sharing and the required approval process still need confirmation.

Does the answer bank update automatically?

It updates within the Instructor Desk conversation. The professor must replace the file for Student Helper to use the new answer.

How much time has it saved?

Real-world savings have not been measured. We have a fictional workload estimate and a small exploratory comparison.

Why choose this over an ordinary chat?

The same model can find the plan. The added value is reusable course instructions, visible checks and a defined approval process.

APPENDIX

Judge questions: safety and maintenance

How is student information protected?

The demonstrated tasks need no grades or student records. It does not ask for passwords or health details, and personal cases go privately to the professor.

How do you prevent cheating?

It applies the course AI policy, explains requirements and leaves graded writing to the student. In testing it refused to write a paragraph.

Who maintains the files?

The participating professor maintains the course pack and answer bank. Any wider ownership needs agreement before a pilot.

What would you do with another month?

Fix the invalid-date response, repeat the tests, prepare the pilot measures and confirm access and review requirements.

APPENDIX

Helper or FAQ page: what each adds

An FAQ remains useful. The helper adds a workflow around approved answers.

Aspect	Well-maintained FAQ page	Assignment helper
Finding an answer	Search or browse the page	Ask in everyday wording; matched by meaning
Checking the source	Can include citations	Cites the approved entry ID (A4, A8, G5)
A question nobody answered	Added when someone edits the page	Drafts a question; the professor approves a new entry
Next semester	Reviewed by hand	Semester review: keep, update, needs decision, retire
Conflicting instructions	Depends on the editor	Shows both and asks the professor

APPENDIX

RECORDED, NOT LIVE

Recorded run: the revised schedule

Recorded in owlONE on October 16, 2026. Fictional demonstration data.

E02	10:00–10:50 a.m.	10:00–10:50 a.m.	V1 slot is in suspension; next usable slot after E01	D1; order rule
E03	Fri Oct 23, 1:00–2:50 p.m.	Thu Oct 29, 1:00–2:50 p.m.	Original lab time is in suspension; use supplied physical backup	D1; physical lab rule
E04	Mon Oct 26, 10:00–10:30 a.m.	Thu Oct 29, 3:00–3:30 p.m.	Original quiz precedes both moved lessons; Tue Oct 27 3 p.m. is only 4h10 after E02 ends, short of 48h; Thu option passes	Quiz-spacing rule
E05	Wed Oct 28, 10:00–10:50 a.m.	Unchanged	Fixed	Instructor rule
E06	Fri Oct 30, 5:00 p.m.	Tue Nov 3, 5:00 p.m.	Thu lab backup would leave only 26h10 to original deadline, short of 48h	Memo-prep rule
E07	Mon Nov 2, 10:00–10:50 a.m.	Unchanged	Optional; no need to move or repurpose	Instructor rule

The memo moves to November 3

The output explains why the Friday deadline would leave only 26 hours and 10 minutes after the lab.

APPENDIX

RECORDED, NOT LIVE

Recorded run: the calculation table

Recorded in owlONE on October 16, 2026. Fictional demonstration data.

E02 → quiz	Tue Oct 27, 10:50 a.m. → Thu Oct 29, 3:00 p.m.	52h10m	48h	PASS
Lab → memo due	Thu Oct 29, 2:50 p.m. → Tue Nov 3, 5:00 p.m.	123h10m	48h	PASS
E05 → memo due	Wed Oct 28, 10:50 a.m. → Tue Nov 3, 5:00 p.m.	151h10m	48h	PASS
Quiz ends → review	Thu Oct 29, 3:30 p.m. → Wed Nov 4, 10:00 a.m.	139h30m	After quiz	PASS
Memo due → review	Tue Nov 3, 5:00 p.m. → Wed Nov 4, 10:00 a.m.	17h	After memo	PASS
Quiz start → memo due	Thu Oct [illegible], 3:00 p.m. → Tue Nov 3, 5:00 p.m.	123h	48h; different dates	PASS
Quiz start → final	Thu Oct 29, 3:00 p.m. → Fri Nov 6, 10:00 a.m.	188h	48h; different dates	PASS
Memo due → final	Tue Nov 3, 5:00 p.m. → Fri Nov 6, 10:00 a.m.	65h	48h; different dates	PASS
Review ends → final	Wed Nov 4, 10:50 a.m. → Fri Nov 6, 10:00 a.m.	47h10m	24h	PASS

Second-pass checks: No required event is in D1's suspension; no weekend replacement is scheduled. The lab remains physical, all events appear once, fixed items are unchanged, and live sessions do not overlap. The lab ends ten minutes before the quiz starts.

123 h 10 m

The lab-to-memo interval includes the November 1 clock change.

The final stays fixed.

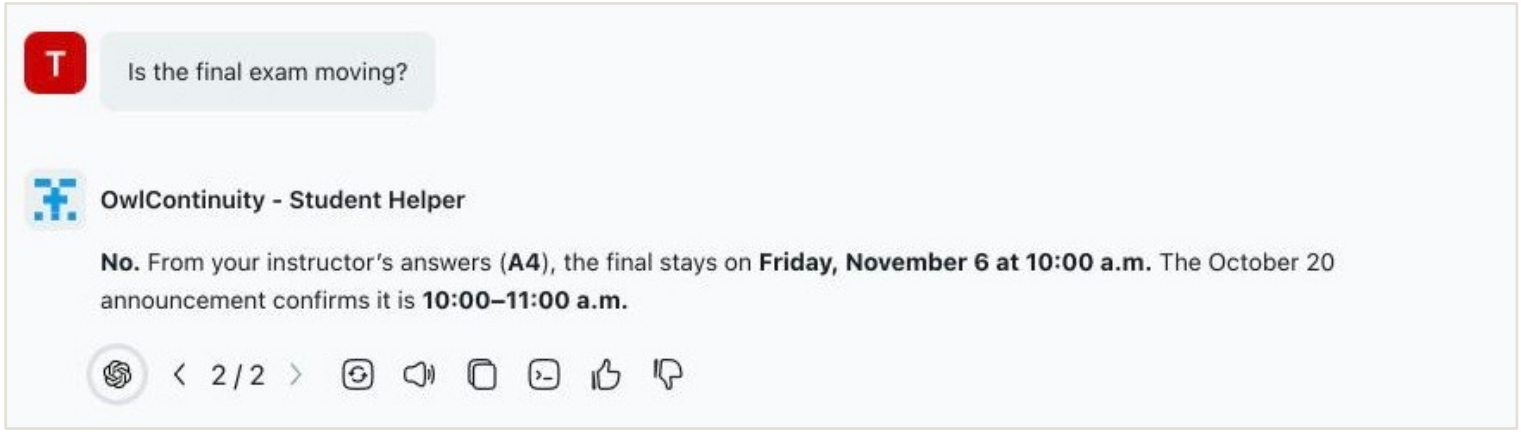

This original output uses quiz start for assessment spacing. Slide 26 shows the stricter quiz-end check.

APPENDIX

RECORDED, NOT LIVE

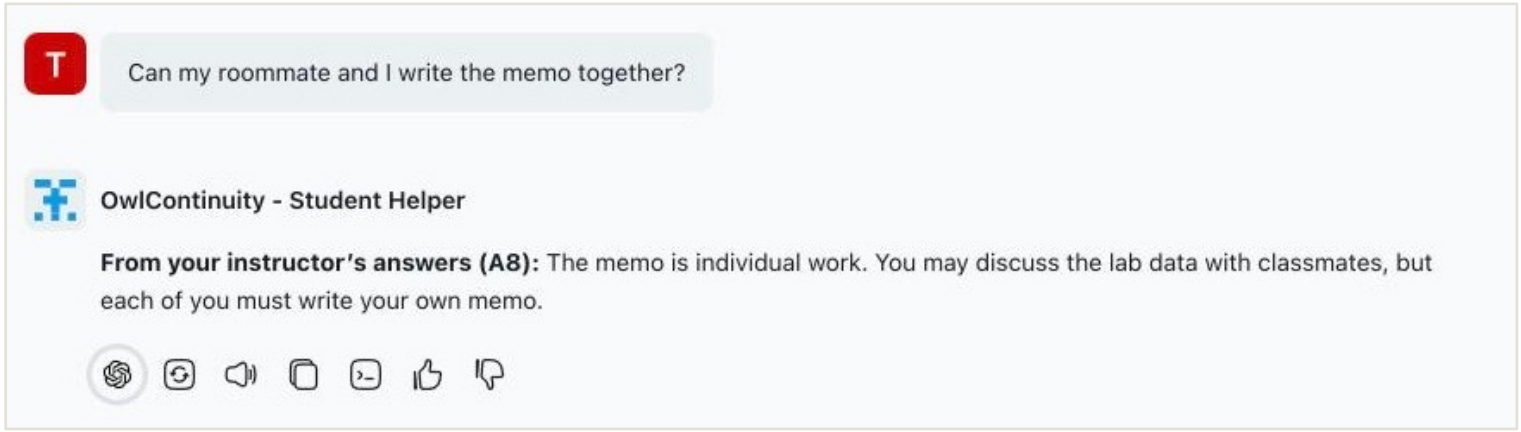

Recorded run: answers from approved sources

Recorded in owlONE on October 16, 2026. Fictional demonstration data.

Final exam question

Answer source: A4

Question about working together

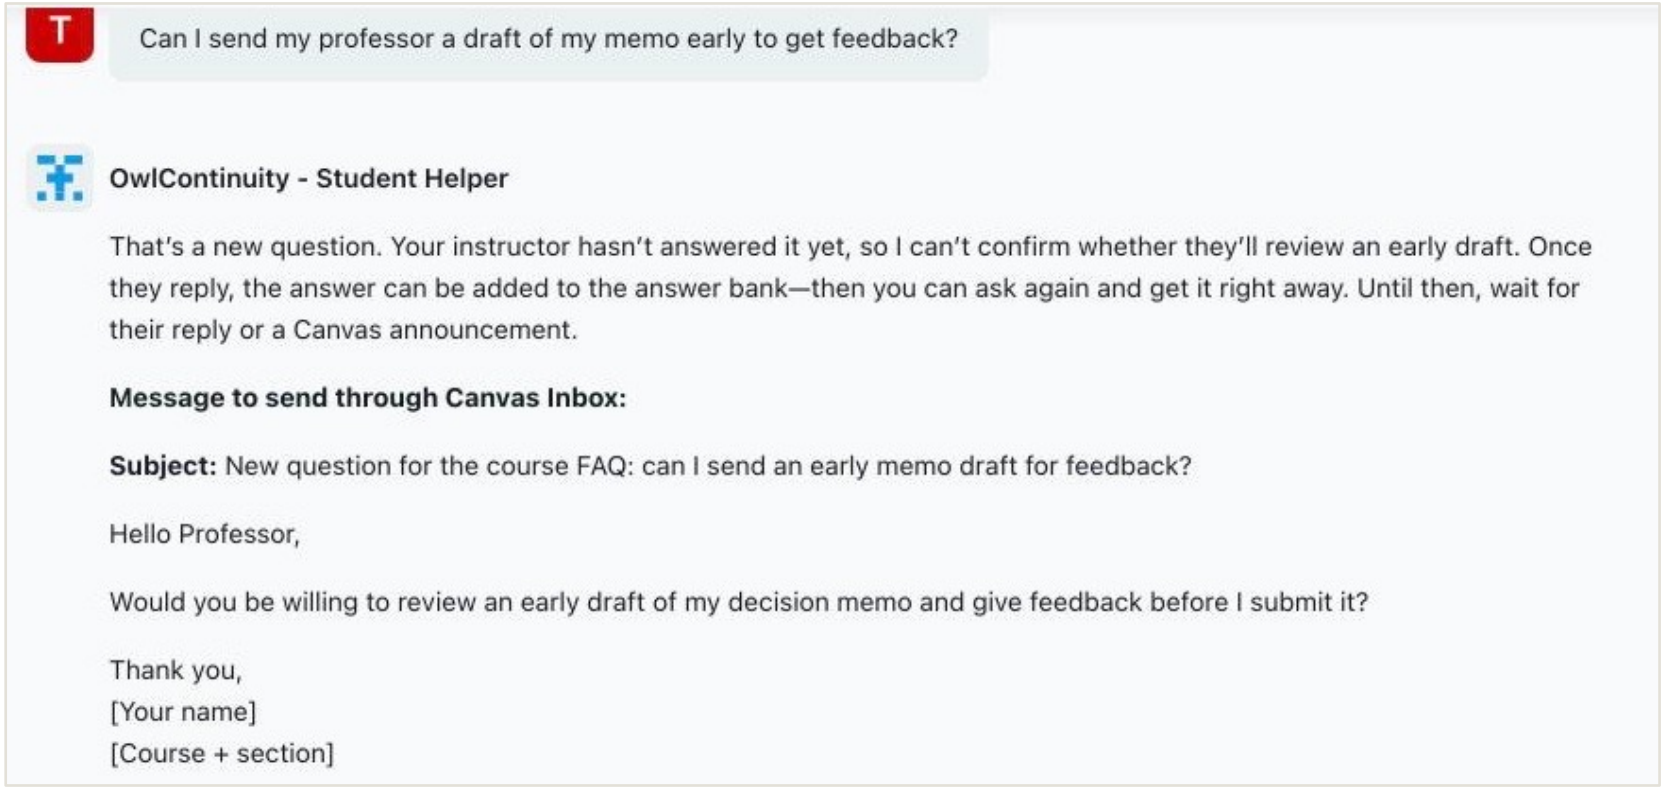

Answer source: A8

APPENDIX

RECORDED, NOT LIVE

Recorded run: a question the bank cannot answer

Recorded in owlONE on October 16, 2026. Fictional demonstration data.

The helper asks the professor

It prepares a message about early feedback. The student chooses whether to send it.

APPENDIX

RECORDED, NOT LIVE

Recorded run: a new professor-approved answer

Recorded in owlONE on October 16, 2026. Fictional demonstration data.

Added as **A11**, approved Oct 22, 2026. I can't save files myself; copy the bank below into your file for the Student Helper.

UPDATED ANSWER BANK

text

```
A1 | Aug 2026 | Q: Can we do the lab online or from home? | A: No. The lab needs t
A2 | Aug 2026 | Q: Where do I find the latest schedule? | A: Always check Announce
A3 | Oct 18, 2026 | Q: Do I have to submit anything while campus is closed? | A: N
A4 | Oct 18, 2026 | Q: Is the final exam moving? | A: No. The final stays on Frida
A5 | Oct 20, 2026 | Q: When is the lab? | A: The lab is on Thursday, October 29, 1
A6 | Aug 2026 | Q: Is the Monday workshop required? | A: No, it is optional practi
A7 | Oct 20, 2026 | Q: Is Quiz 1 open-book? | A: Quiz 1 stays closed-book, but you
A8 | Spring 2026, carried over Oct 21, 2026 | Q: Can we work in pairs on the memo?
A9 | Spring 2026, carried over Oct 21, 2026 | Q: Is the textbook required? | A: No
A10 | Spring 2026, updated Oct 21, 2026 | Q: Can I use AI tools like ChatGPT or Gr
A11 | Oct 22, 2026 | Q: Can I send you a draft of my memo early to get feedback? |
```

New answer: A11

Instructor Desk prints the updated bank.

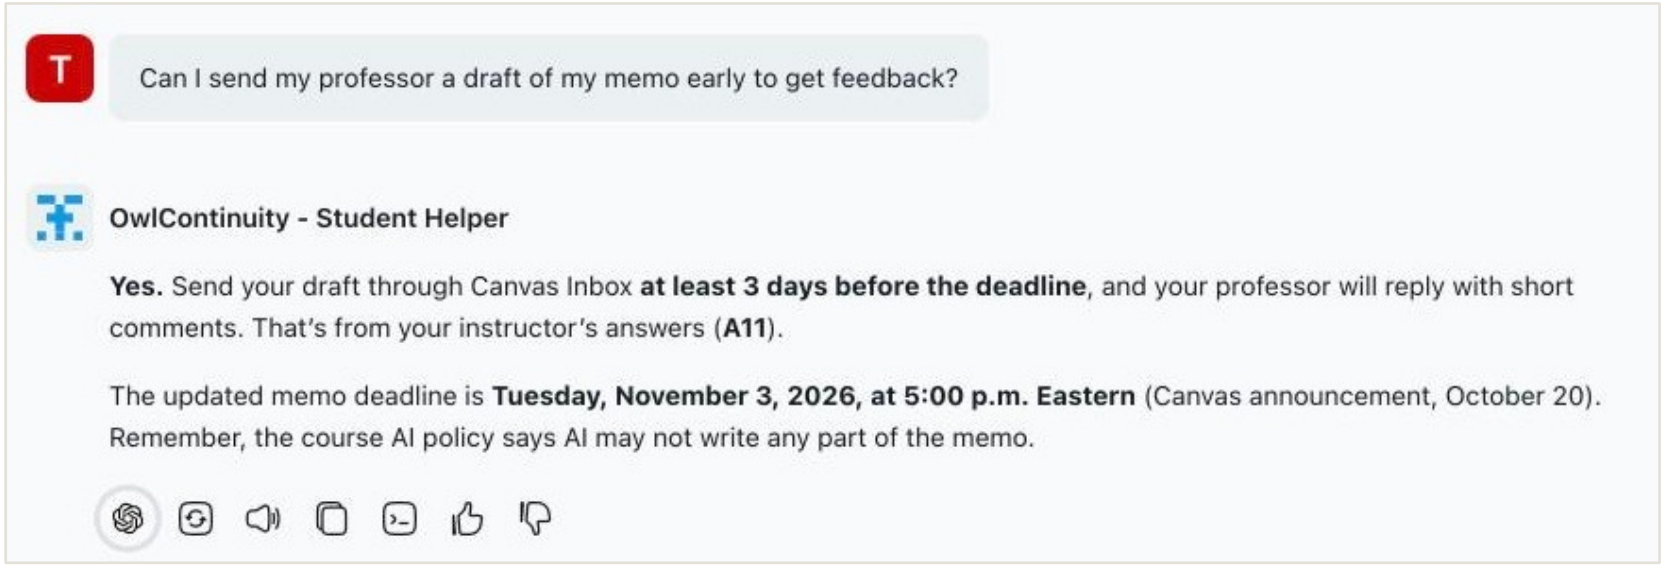

The professor saves it and replaces the Student Helper file.

APPENDIX

RECORDED, NOT LIVE

Recorded run: the next student receives answer A11

Recorded in owlONE on October 16, 2026. Fictional demonstration data.

After the file update

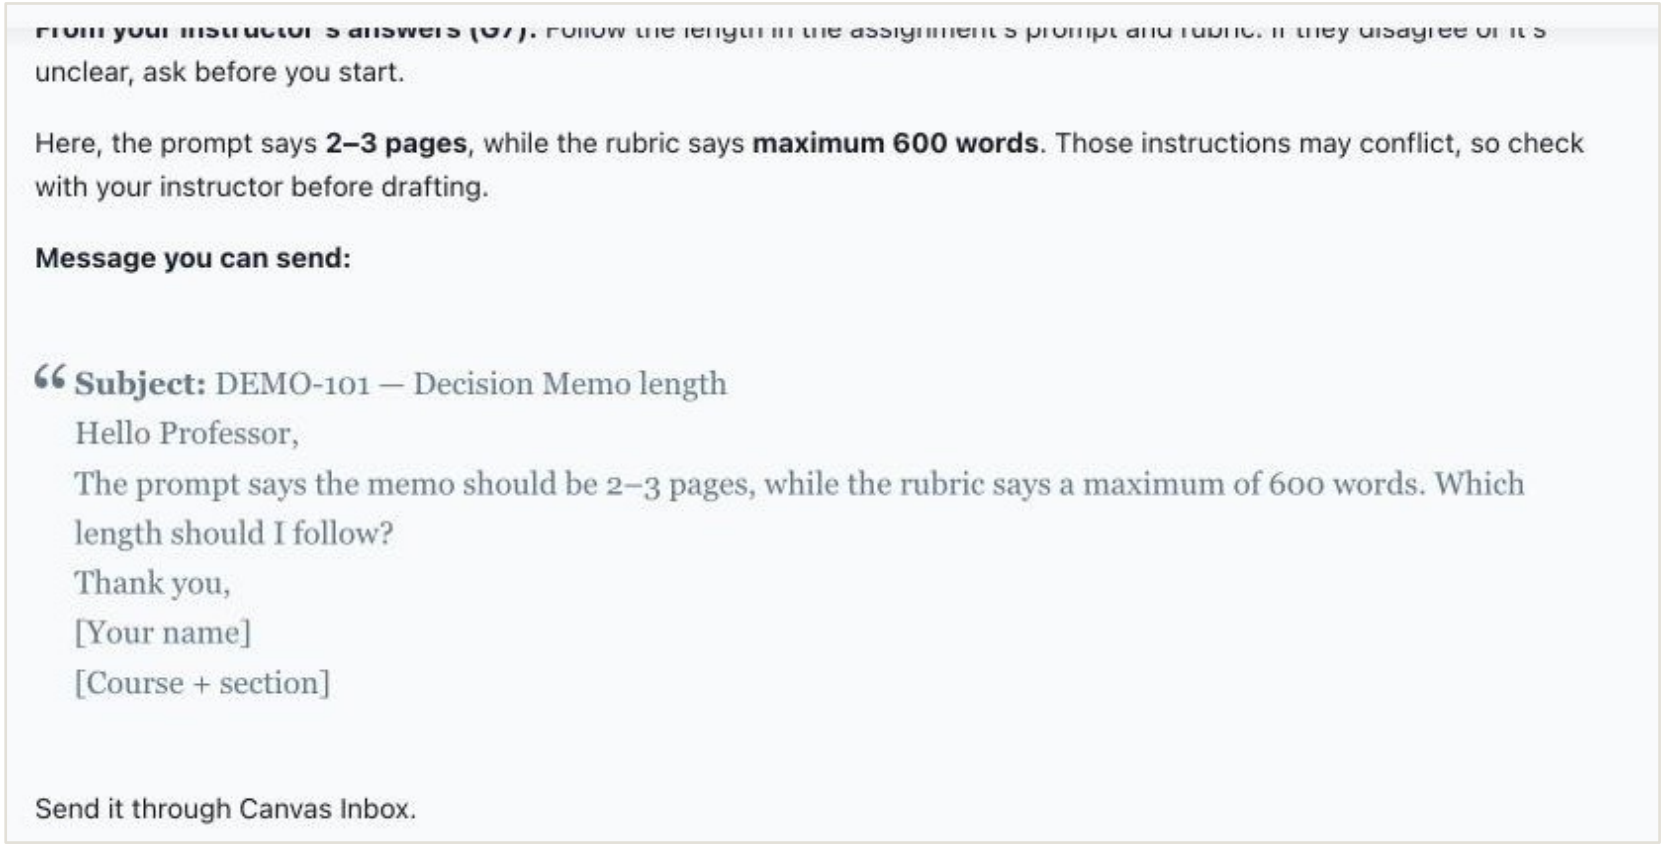

The same question receives the professor's answer, citing A11.

APPENDIX

RECORDED, NOT LIVE

Recorded run: unclear length requirements

Recorded in owlONE on October 16, 2026. Fictional demonstration data.

From your instructor's answers (07): Follow the length in the assignment's prompt and rubric. If they disagree or it's unclear, ask before you start.

Here, the prompt says **2–3 pages**, while the rubric says **maximum 600 words**. Those instructions may conflict, so check with your instructor before drafting.

Message you can send:

> **Subject:** DEMO-101 — Decision Memo length
>
> Hello Professor,
>
> The prompt says the memo should be 2–3 pages, while the rubric says a maximum of 600 words. Which length should I follow?
>
> Thank you,
>
> [Your name]
>
> [Course + section]

Send it through Canvas Inbox.

The helper shows both instructions

It presents "2–3 pages" and "600 words maximum", then drafts a clarification question for the professor.

APPENDIX

Real-syllabus tests: DEMO-202

Live in owlONE, October 17, 2026. Real syllabus; closure, exact days and answers are team test values.

#	Agent	Test	What it did	Result
D1a	Instructor Desk	Syllabus as is (weeks only) + outage	Asked for exact dates; invented none	**PASS**
D1b	Instructor Desk	Quiz 3 domino with exact days	22 h 40 m FAIL → Thu Oct 29, 70 h 40 m	**PASS**
D2	Instructor Desk	New question → professor answer	Added A6; next student got A6	**PASS**
D3	Instructor Desk	Prompt and readings check	Flagged missing dataset, rubric, date	**PASS**
D4	Instructor Desk	Project Part 3 deadline domino	250 h 9 m FAIL → Nov 23, 346 h 9 m	**PASS**
H1	Student Helper	ChatGPT to brainstorm?	No: course bans AI for all work	**PASS**
H2	Student Helper	30 hours late	20% penalty	**PASS**
H3	Student Helper	Missed quiz, sick	One make-up in last class; private message	**PASS**
H4	Student Helper	Final exam?	No; 4-part project	**PASS**
H5	Student Helper	Where is the textbook?	Exact syllabus link	**PASS**
H6	Student Helper	Project Part 4 exact date?	New question, tagged; later A6	**PASS**
H7	Student Helper	Record group presentations?	No; lectures only	**PASS**
H8	Student Helper	Write PageRank code	Declined (AI ban)	**PASS**
H9	Student Helper	Quiz 3 still Tuesday?	Thu Oct 29 from announcement	**PASS**
H10	Student Helper	Grammarly?	Not without explicit permission	**PASS**
H11	Student Helper	89.5% = A-?	Scale: B+ range; private message	**PASS***
H12	Student Helper	Roommate on Part 3?	Individual work (A4)	**PASS**

** H11 read the grade scale correctly but used a private message, not the FAQ tag. D1b asked the professor about one class period instead of moving a lecture.*
